TECHNICAL DATA SHEET
RITEMIX PC 200
High Performance PC Polymer-based Admixture

PRODUCT DESCRIPTION:

RITEMIX PC 200 is amber to light brown new generation admixture based on Polycarboxylate polymers. Its high water reducing property ensures good workability, high and early compressive strength. Formwork and shuttering can be removed at early age due to its hardening acceleration properties.

CUSTOMER BENEFITS

• Produces free flowing concrete without segregation and bleeding.
• Gives substantial and economical cement savings without strength or workability loss.
• Produces self-compacting concrete without segregation.
• Good slump retention for longer time.
• Allows reduction of added water which increases concrete density and reduces porosity, resulting on improved water penetration resistance.
• Reduces concrete segregation thus improving surface finish.
• Reduces or eliminates need for compaction thus saving time and money.
• Superior performance than the conventional superplasticizers.

AREAS OF APPLICATION

• As a superplasticizer to produce fluid concrete requiring little or no vibration during placing eg where reinforcement is heavily congested.
• As a highly efficient water reducer without loss of workability resulting in reduced permeability and accelerated early strength gain.
• Ready mix applications
• Precast applications
• Pre stressed concrete

DOSAGE

• 0.8 to 1.2% per kg cement for high workability concrete.
• The exact dosage required is best established by site trials.

PHYSICAL PERFORMANCE

Workability
The addition of RITEMIX PC 200 will produce flowing concrete at the same water/cement ratio of untreated concrete requiring little or no vibration during placement.

Compressive Strength
Substantial reduction in water/cement ratio will result in significant increase in compressive strength without the loss of workability.

Dispensing
The correct quantity of RITEMIX PC 200 should be measured by means of a recommended dispenser. Normally, the admixture should then be added to the concrete with the mixing water to obtain the best result.

Curing
As with all structural concrete, good curing practice should be maintained, particularly in situations where an overdose has occurred. Water spray or Buildrite Curing compound spray applied curing membrane should be used.

PACKAGING
RITEMIX PC 200 is available in 20 liter pails or in 200 liters drum.

STORAGE
RITEMIX PC 200 has a minimum shelf life of 1 year when stored in the original unopened containers under normal warehouse conditions.

HEALTH AND SAFETY
Suitable protective gloves and goggles should be worn.
Splashes on the skin should be removed with water.
In case of contact with eyes rinse immediately with plenty of water and seek medical advice.

FIRE
RITEMIX PC 200 is water based and non-flammable.
